

Skill Training for Web and Mobile Applications Developer

The US Bureau of Labor Statistics reports that the seven fastest-growing professions all involve computer related or IT professions. In fact, according to a recent study, IT is one area of employment that will grow 16% by the year 2016. This means students who have earned an information technology certification will be able to choose from a wide variety of jobs. They will have the chance to create networks, security systems, and online marketing programs with very competitive salary rates.

The goal of the Insystech Web and Mobile Applications Developer Training* program is to familiarize the student with a variety of software and system applications that will prepare him or her for an IT career.

It should be noted that web designers receive broad-based training in design issues with a focus on usability and technical production. Web design is applicable to numerous industries and currently enjoys very strong demand across all educational degree levels. Beginning designers typically earn from \$40,000 to well over \$150,000 for more experienced positions. Pay is proportional to the educational and skill level of the designer, with many individuals holding an Associates or Bachelors degree in web design, in addition to another degree in a related design field.

One fifth of the world's population will soon have a mobile device and access to the Internet. With that many potential users comes an inevitable explosion of mobile applications. You can lead the way in web and mobile application development by becoming certified today!

Program of Study

- Web Site Development
- Web Applications Architecture
- Mobile Applications Architecture
- Developing Web Based Applications
- Developing Mobile Applications

In addition to learning these topics and gaining experience in these specific topics, the trainees will also gain valuable experience in a real job setting. Formal and in formal team meetings will be conducted to ensure that the trainees understand and follow processes that traditional software development teams follow.
